

THE WATCH STORE

NAME :- G.PHINY FRANCIS

ROLL .NO:- AP19110010190

COLLEGE NAME:- SRM UNIVERSITY AP

This is an e-commerce website made using Django Framework. This project helps to ensure social distance in the watch shops while customers place orders. Using this a customer can place the order and this order summary will be transferred to the manager and they will deliver their respective orders to the Customer. This site has three kinds of end-users. They are User, Manager and Admin.

Every person who enters this site has to register themselves till then they will be considered as guest users except the admin and they will be considered as users after they registered themselves.

All the places orders can be seen by the admin and the manager can manage them when he logs in with his account. Admin can give roles and also strip them and the users will again be considered as guests and they have to request again for roles.

A user can access home,about,contact and order placing pages and the user can also give feedback.

All the placed orders are visible to the manager and he can delete the orders if they are delivered.

Concepts used:-

- login/logout
- create ,read,update and delete operations
- Roles
- Messages
- Foriegn key.
